

Powerful, Penetrating Protection

-  Covalent Bonding
-  1K Single Component
-  Stain Resistant
-  Extreme Hardness
-  UV Stable
-  Spray & Microfiber

Coval Polished Concrete Sealer protects polished concrete without altering its distinct, glossy sheen. In great demand in retail, warehouse, and exhibit space, polished concrete is occasionally not coated for protection since typical sealers often change the look of it. The risk of not coating it, however, invites the probability of stains.

Coval Polished Concrete Sealer is a clear, thin-film, single component coating that penetrates polished concrete and Terrazzo to form a covalent bond with the surface for an extremely hard barrier against stains, acids, and oils. It is easily applied with an acetone pump sprayer and saturated using a microfiber mop. It provides a sustainable solution - easy cleaning, reduced maintenance costs, and less dependence on harsh cleaning chemicals.

Coval coatings contain less than 100 g/L VOCs and exceed SCAQMD Rule 1113 requirements for air quality; as well as contain no known carcinogens under Proposition 65, California's Drinking Water and Toxic Enforcement Act of 1986.

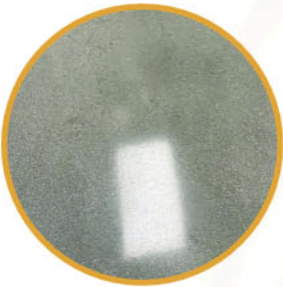

Coval Polished Concrete Sealer offers powerful, penetrating protection to polished concrete & Terrazzo.

For more information visit us at www.covaltechnologies.com or call +1-281-566-4277.

Polished Concrete: Concrete should be densified and polished before application of Coval PCS for a nonsacrificial, long-lasting barrier against stains and acid etching that does not require harsh chemicals to clean. Reapplication in heavy traffic areas adheres to itself.

Polishable Concrete Overlays: Concrete overlays must be polished with 400 grit for minimum porosity with the installation of Coval Polished Concrete Sealer.

Terrazzo: The penetrating sealer gives even better protection than traditional sealers. It lasts for years in high traffic areas with no need for buffing, with a new, long-lasting, chemical and liquid defense.

Achieve ultimate protection on nearly any substrate with these related products. Contact an authorized Coval product representative or visit the website for details.
