

ZENESIS™

Porcelain

Sintered Stone

Petrified Wood

Slabs with Geodes

ZENESIS™

50/60mm Arbor Size

CARBON

The ZENESIS™ CARBON is a very unique continuous rim blade that was originally designed for large format porcelain slabs. We quickly discovered that it is excellent for many other challenging materials like sintered stone, delicate marble and intimidating semi-precious stones. The tightly butted thin kerf segments easily glide through all of these materials. The added reinforcement to the core keeps the blade running straight and true over long cuts.

It is a highly versatile all-around blade for lower HP (less than 20hp) saws that might otherwise struggle with hard materials. The ultra-thin rim combined with tightly butted segments renders a remarkably clean finish in both straight and miter cuts, and the reinforced core keeps the blade from deflecting while cutting. Combine that with superior manufacturing and highest-grade materials, and you get a blade deserving to be called ZENESIS™!

- Cuts Porcelain, Sintered Stone, Petrified Wood, and Slabs made with Geodes
- Wet use only

Part No.	Diameter	Segment	Arbor size
ZLSGD10UT1210T	12"	10mm	60/50mm
