

106R Granite Polishing Paste

Final polish and maintenance for polished granite

Overview

106R Granite Polishing Paste is a creamy paste that contains high quality polishing abrasives for granite polishing and re-polishing.

106R is easy to use and is chemically inert.

Packaging: 1 Kilogram (2.2 lbs.)

Applications & Directions

Use 106R as the final polishing step after diamond honing for a brilliant factory type polish, or for polish maintenance on a regular basis in commercial areas.

Coverage: 100 to 300 sq. feet per Kilogram.

1. Clean surface to be polished with GranQuartz Stone Care Systems 515C Periodic Intensive Cleaner. The surface must be free of sealers, wax, dirt or maintenance products.
2. After the cleaned surface is dry, apply one tablespoon of 106R directly to the surface using a plastic putty knife or other non-abrasive, flexible material.
3. Spread the material onto 1 square foot area.
4. Using a natural fiber buffing pad and a buffer weighing at least 140 lbs., buff a 12 to 15 square foot area until completely dry and free of streaks.
5. Move to an adjacent area and repeat the procedure.

Test in a small area prior to general application to determine suitability, amounts and appearance.

Health & Safety

Eyes: Flush eyes with plenty of water, occasionally lifting the lower and upper lids.

Skin: Wash with mild soap and water or waterless hand cleaner to remove carbon black dust.

Inhalation: For inhalation discomfort, remove to fresh air.

Ingestion: Entry by mouth is not likely to produce adverse effects.
